

Object wizards - Create forms in Pimcore backend

Preparation

1. [Install Docker](#) (if not installed yet)
2. Clone <https://bitbucket.org/blackbitwerbung/pimcore-plugins-data-director> and go to branch “master”, refresh it via `git pull`
 - if you do not have git, please [download the bundle](#) and unzip it
3. Go to the directory which you cloned / unzipped the files into
4. On command line run `./docker-setup.sh` and wait till this is finished
5. Go to `http://localhost:2000/admin/` -> a Pimcore backend should appear
6. Login with User: admin, Password: admin
7. Generate data object class **Brand** and import [its class definition](#)
8. Generate data object class **Product** and import [its class definition](#)
9. Right-click on Assets -> Home -> click “Import from Server” and import `/data-director-bundle/examples/9-object-wizard/import`
10. Create new dataport **Import Brands**, [import dataport configuration](#) and run complete import

Topics

Prerequisites

1. Run import via start menu -> import summary show which progress, changes, errors etc.
2. Object creation
 - Prerequisites
 - Object hierarchy is defined as
 - * Brand (1st level)
 - Product (2nd level)
 - SKU is a mandatory field.
 - Create product **Gold ring** under Brand **Kiara Jewellery**
 - Default Pimcore way:
 - * Find brand **Kiara Jewellery**
 - in optimal case, you can use the tree search (but it only searches for prefixes!)
 - in worst case you navigate manually in the tree or use the data object search and **show in tree** button
 - * right-click **Kiara Jewellery**
 - * select class **Product**

- * Enter **Gold ring** as object name
- * Enter product name *again*
- * Enter SKU as it is a mandatory field
- * Save & Publish
- Object wizard way:
 - Create an object wizard form with 3 fields:
 - * SKU
 - * Name
 - * Brand
 - accessible from main menu
 - focuses only on the fields which matter for this workflow
 - new object gets created in the desired position with 2 clicks
- 3. Move product /Products/- without Brand -/Avon PK_504 Analog Watch - For Men, Boys to /Products/Avon Problem: You cannot show both objects in the tree at the same time.
Solution: Create an object wizard form with 2 fields:
 1. a field for setting one or multiple products
 2. a field for the target brand object which the products should be moved to
- 4. Create object wizard dataport to raise prices for all products of brand **Speedwav** by x %
- 5. Export products as JSON with fields **SKU**, **product name**, **price** via start menu object wizard
- 6. Create form (object wizard) to create brochure as Pimcore document for selected products
